</table>

Soil Volume Guide:
Approx. 75m³ of soil (±5%), depending on soil type and excavation variations.

Note: Adequate drainage from base of trench to be provided if design incorporates WSUD principles, or if site conditions require.

Note: Ensure the pit base is screened, leveled and compacted properly before placing cells/layer, to allow for ease of installation of overall matrix.

Installation/Excavation Tips:
1. Add 5% to outer plan dimensions when excavating pit.
2. Always check pit dimensions at base of pit, ensuring sides are clean and square.
3. Level, and screen drainage layer prior to placement of cells.
